DATE MAILED: 09/08/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

DETAILED ACTION

1. This action is amendment received on July 10, 2006. Claims 1, 4 and 6 were amended. Claims 1-6 and 10-20 are pending examination.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-6 and 10-20 are rejected under 35 U.S.C. 102(e) as being anticipated by Salesky et al., U.S. Patent No. 6,343,313 (referred to hereafter as Salesky).

Salesky teaches the invention explicitly as claimed including a system and method for presenting a document by a presenter to a plurality of attendees where the presenter may point to specific portions of the document being presented (see abstract).

As to claim 1, Salesky teaches a system that supports a document-centered discussion among heterogeneous display devices comprising:

an invitation storage memory that stores invitation information regarding invitations to discuss a document wherein the invitation information comprises identities of entities invited to join the at least one discussion (see col. 18 lines 12-26 and col. 1 lines 65-col. 2 lines 7, the server stores information regarding the identities of the attendees that are allowed to join the conference);

a view storage memory that stores view information for each active discussion wherein the view information comprises information on each conference participant (see col. 17 lines 1-50 and col. 1 lines 65-col. 2 lines 7, conference server stores information regarding scheduled and live presentations);

a controller that controls the invitation storage memory and the view storage memory to specify invitation information for at least one user specifying view information for an accepted invitation stored in the view storage memory wherein the view information includes information which allows users of each of the heterogeneous display devices to collaborate within a document in which the document is centered (see col. 2 lines 15-65, conferee may specify name, time purpose of the conference and privileges of other users to join the conference);

a document translation converting a format of the document from a native format to a standard format (see col. 9 lines 1-62, document is translated to device dependent format);

wherein the view information includes a context identifier that identifies a portion of the document according to a location of the portion of the document within the document (see col. 17 lines 1-50, col. 7 lines 57-col. 8 lines 9 and fig. 7A, server stores identification of portions of document being presented with time stamps).

As to claim 2, Salesky teaches the system of claim 1, further comprising a user contact storage memory that stores user contact information, and wherein the invitation information stored in the invitation storage memory for at least one invitation includes information from the user contact storage memory (see col. 14 lines 60-col. 15 lines 15).

Art Unit: 2157

As to claim 3, Salesky teaches the system of claim 2, wherein each user contact entry of the user contact storage memory includes at least one of a user identifier and a device identifier (see col. 14 lines 60-col. 15 lines 15, network address and e-mail address are used to identify a conferee).

As to claim 4, Salesky teaches a method for supporting document-centered discussion among heterogeneous display devices, comprising:

entering invitation information to a discussion into an invitation store wherein the invitation information comprises identities of entities invited to join the at least one discussion (see col. 18 lines 12-26 and col. 1 lines 65-col. 2 lines 7);

identifying invitees to the discussion based on the invitation information in the invitation store (see col. 17 lines 1-50);

determining invitation acceptance and for accepted invitation (see col. 17 lines 1-50 and col. 1 lines 65-col. 2 lines 7),

entering invitee specific information and invitation information into a view store (see col. 17 lines 1-50);

a document translation converting a format of the document from a native format to a standard format (see col. 9 lines 1-62, document is translated to device dependent format);

updating invitee view information based on in the current focus of attention;
viewing information for the invitee based on context information of the inviter wherein the current focus of each of the at least one invitee may be different from a current

Art Unit: 2157

focus of an inviter (see col. 11 lines 65-col. 12 lines 8, each conferee may choose to share a portion of the display and not all the display);

updating the view information of for the invitees based on context information of the inviter, wherein the view information includes information which allows users of each of the heterogeneous display devices to collaborate within a document in which the document is centered (see col. 2 lines 15-65).

As to claim 5, Salesky teaches the method of claim 4, further comprising displaying the document based on stored user information (see col. 2 lines 15-65).

As to claim 6, Salesky teaches the of claim 5, further comprising displaying the document using at least one of a device type, a device identifier and a display capability from a user contact information store (see col. 9 lines 14-63).

As to claim 10, Salesky teaches the system further comprising a device translation circuit, the device translation circuit converting the document from a standard format to at least one device-specific format (see col. 9 lines 1-62).

As to claim 11, Salesky teaches the system further comprising a user contact storage memory which stores user contact information, wherein the user contact information includes at least one of a user identifier and a device identifier and the device-specific format is based on the device identifier for an invitee (see col. 14 lines 60-col. 15 lines 15).

As to claim 12, Salesky teaches the system of claim 1, wherein the view information includes at least one of an invitee identifier, a device type: for each invitee identifier and a context identifier (see col. 14 lines 60-col. 15 lines 15).

As to claim 13, Salesky teaches the system of claim 12, wherein the device type is obtained from a user contact storage memory which stores user contact information (see col. 14 lines 14-col. 15 lines 15).

As to claim 14, Salesky teaches the system of claim 1, wherein the context identifier includes at least one of information which identifies a portion of the document which an invitee is currently focusing on and information which identifies a portion of the document which an inviter is currently focusing, wherein the current focus of each of the at least one invitee may be different from a current focus of an inviter (see col. 11 lines 65-col. 12 lines 8, each conferee may choose to share a portion of the display and not all the display).

As to claim 15, Salesky teaches the system of claim 13, wherein the context identifier includes at least one of a name of the document and a location of the document (see col. 2 lines 15-65).

As to claim 16, Salesky teaches the system of claim 1, wherein the stored invitation information includes at least one of an invitee identifier portion which identifies a user invited to the document-centered discussion, an inviter identifier portion which identifies a user which initiated an invitation, a time and date stamp portion which identifies a time and a date when the invitation was issued and a status indicator portion which indicates a status of the invitation (see col. 2 lines 15-65).

As to claim 17, Salesky teaches the system of claim 16, wherein the status of the invitation is one of broadcast and awaiting reply, not yet broadcast, refused, and accepted (see col. 2 lines 15-65).

As to claim 18, Salesky teaches the system of claim 12, wherein the context identifier specifies at least one of a document name, a document location and a specific invitee's current focus of attention within the document on which the document-centered discussion is based (see col. 2 lines 15-65).

As to claim 19, Salesky teaches the system of claim 12, wherein the invitee identifier identifies an invitee device used to accept the invitation (see col. 2 lines 15-65).

As to claim 20, Salesky teaches the system of claim 19, wherein the view information includes a device type previously associated with the invitee device used to accept the invitation (see col. 2 lines 15-65).

Response to Arguments

3. Applicant's arguments have been fully considered but are moot in view of the new grounds of rejection.

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any

Art Unit: 2157

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

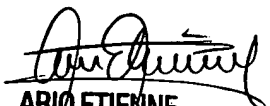

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Hussein A. El-chanti whose telephone number is (571)272-3999. The examiner can normally be reached on Mon-Fri 8:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ario Etienne can be reached on (571)272-4001. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
